# DALLARA STRADALE

First street-legal model from Dallara Automobili features LEXAN™ resin, a polycarbonate material, for all exterior glazing surfaces

## MORE STYLISH

Geometric flexibility of LEXAN resin enables a windshield with an almost spherical shape, not possible in conventional glass

## MORE AERODYNAMIC

Glazing curvature with LEXAN resin allows for the design of a continuous transparent canopy that is more aerodynamic

## 35% WEIGHT SAVINGS

Half the density of conventional glass, use of LEXAN resin reduces glazing weight, potentially contributing to improved handling and performance

## DURABLE

A hard coat delivers protection from abrasion, UV degradation and other weathering influences
