Version: 19 April 2024

## **REGULATORY DATASHEET STAMAX™ 40YM243 - in all colours**

Dear most valued customer,

Thank you for using SABIC products.

This Regulatory Datasheet (RDS) is specific to **STAMAX™ 40YM243 - in all colours**, in the following also referred to as SABIC Product. It covers the following topics:

- REACH Registration / SVHC / ANNEX XIV / ANNEX XVII
- Microplastics
- Phthalates / Endocrine Disruptors / CMR substances / Cosmetics Regulation / EuPIA Exclusion Policy
- California Proposition 65
- Animal origin, TSE/BSE, Kosher/Halal
- Per- and PolyFluorinated Alkyl Substances (PFAS)
- PPW / ELV / RoHS / WEEE / CONEG
- Certain restricted substances
- Halogens
- SABIC® TRUCIRCLE™ products

### REACH Registration / SVHC / ANNEX XIV / ANNEX XVII

PLEASE NOTE THAT ITEMS IN THIS SECTION RELATED TO REACH REGISTRATION ONLY APPLY TO CUSTOMERS THAT HAVE PURCHASED A SABIC PRODUCT DIRECTLY FROM ONE OF THE SUBSIDIARIES OR AFFILIATES OF SAUDI BASIC INDUSTRIES CORPORATION (SABIC) WITH SEAT IN THE EUROPEAN UNION (EU).

SABIC (NOR ITS AFFILIATES) DOES NOT ASSUME ANY RESPONSIBILITY OR LIABILITY FOR ANY OBLIGATION UNDER EU REACH FOR SABIC PRODUCTS BEING SHIPPED INTO THE EU BY THIRD PARTIES AS IMPORTER OF RECORD. CUSTOMERS ARE OBLIGED TO COMPLY WITH ANY EU REACH OBLIGATION DIRECTLY THEMSELVES. SABIC WILL NOT ACT AS OR APPOINT AN ONLY REPRESENTATIVE UNDER EU REACH.

Polymers are exempted from Titles II (Registration of substances) and VI (Evaluation) according to Article 2(9) of EU Regulation (EC) 1907/2006 of 18 December 2006, concerning the Registration, Evaluation, Authorisation and Restriction of Chemicals (REACH) as amended from time to time (hereinafter referred to as EU REACH regulation).

#### Page 2 of 14

Version: 19 April 2024

According to the requirements of Article 6(3) of the EU REACH regulation, any manufacturer or importer of a polymer that comprises more than 2% of (a) chemically bound monomer(s) in a volume exceeding 1000 kg per year has to register the monomer(s) used. SABIC appointed its affiliate SABIC Petrochemicals B.V. based in the Netherlands to fulfil its tasks and responsibilities for complying with the legal requirements of the EU REACH regulation. SABIC Petrochemicals B.V., representing SABIC, has successfully registered the monomer(s) used in the SABIC Product under the EU REACH regulation.

Plastic materials, such as produced by SABIC are mixtures (the polymer part, residual monomer(s), stabilisers, additives, etc.). According to the EU REACH regulation mixtures do not need separate registration if the individual parts of the mixture are (pre)-registered.

For substances for which SABIC is a Downstream User, and thus has no registration obligation itself, SABIC has confirmed with all its suppliers that their registration obligations under the EU REACH regulation have been met. SABIC will not use any product or will do business with a supplier that not compliant with the EU REACH regulation. SABIC Petrochemicals B.V., representing SABIC, has registered all (imported) substances for which there was a registration obligation and will continue to ensure SABIC's regulatory compliance with the EU REACH regulation.

Please note that the EU REACH registration of the substance(s) subject to registration in the SABIC Product is <u>restricted</u> to the product as manufactured by SABIC in the EU or imported by SABIC Petrochemicals B.V. and <u>cannot</u> be used by or relied upon by any third party.

This SABIC Product is a non-hazardous mixture according to the criteria for classification of EU Regulation (EC) 1272/2008 on the classification, labelling and packaging of substances and mixtures, and its amendments. Therefore, this non-hazardous SABIC Product is not subject to the requirements of Article 31(1) and 31(2) of the EU REACH regulation.

Since SABIC has no legal obligation to set up a Safety Data Sheet (SDS) according to Article 31 (6) and Annex II of the EU REACH regulation, the fact that SABIC issues such an SDS should be regarded as information provided on a voluntary basis as part of SABIC's Responsible Care efforts. It should be noted that an SDS, issued by SABIC, for this SABIC Product does not always contain all subheadings as listed in Part B of Annex II of the EU REACH Regulation, or all of the mandatory information on its use and application.

Regarding the presence of Substances of Very High Concern, we can inform you as follows:

According to the recipe in the production of the SABIC Product, SABIC does not intentionally add:

- Substances of Very High Concern (SVHC), included in the most recent and authentic "Candidate List of Substances of Very High Concern for Authorisation", in a concentration above the threshold limit of 0.1%, as published by the European Chemicals Agency (ECHA) on <a href="http://echa.europa.eu/web/guest/candidate-list-table">http://echa.europa.eu/web/guest/candidate-list-table</a>, dated January 23, 2024 (List of 240 substances)
- Substances subject to the provisions of Annex XIV (Authorisation) or Annex XVII (Restriction) of the EU REACH regulation, and its amendments.

Page 3 of 14

سابک خطاعند

Version: 19 April 2024

 Substances listed in the UK REACH Candidate List of Substances of Very High Concern (SVHCs) for Authorisation in accordance with Article 59(10) of UK REACH.

Although these substances as such are not intentionally added to the SABIC Product, and the absence has not been checked by tests, this does not exclude the presence of negligibly slight traces due to, amongst others, impurities in the components supplied by external parties and used in the production of such components.

This SABIC Product may contain residual traces of a phthalate<sup>1</sup>, originating from the catalyst system used in its manufacturing process. Since these residual traces are not intentionally added to the SABIC Product to achieve a technical effect in the final article, they are regarded as an impurity<sup>2</sup>. According to the ECHA "Guidance for monomers and polymers" (Version 3.0, February 2023), impurities are <u>exempted</u> from the obligation to register and are therefore not subject to Authorisation or Restriction.

Moreover, the content of the residual phthalate present in the SABIC Product is <u>far below</u> the lowest concentration limit as specified in:

- Annex I of Regulation (EC) No. 1272/2008 of the European Parliament and the Council of 16 December 2008 on classification, labelling and packaging of substances and mixtures, amending and repealing Directives 67/548/EEC and 1999/45/EC, and amending Regulation (EC) 1907/2006, which result in the classification of materials as hazardous. According to Article 56(6)(b) of REACH such concentrations are exempted from Authorisation.
- Annex XVII (Restriction) of EU Regulation (EC) No 1907/2006 incl. amendments.

Therefore, SABIC considers above-mentioned use of phthalates <u>not subject</u> to the requirements of Annex XIV (Authorisation) and/or Annex XVII (Restriction) of the EU REACH regulation, and its amendments.

<sup>1</sup> The identity of this substance is subject to confidentiality provisions of SABIC.

### **Microplastics**

As stated in the European Green Deal and the Circular Economy Action Plan, the European Commission (EC) is committed to fight microplastics pollution. The EC adopted Commission Regulation (EU) 2023/2055 restricting sales of synthetic polymer microparticles on their own or intentionally added to mixtures - better known as "the microplastics restriction". The regulation amends Annex XVII to the EU REACH regulation as entry 78 and entered into force on October 17, 2023, with some sector specific transition periods ranging from 4 years to 12 years.

<sup>&</sup>lt;sup>2</sup> ECHA Guidance for identification and naming of substances under REACH and CLP (V.2.1 of March 2017): "Impurity: An unintended constituent present in a substance as manufactured. It may originate from the starting materials or be the result of secondary or incomplete reactions during the manufacture process. While it is present in the final substance it was not intentionally added".

Page 4 of 14

Version: 19 April 2024

The new restriction aims to reduce emission of intentionally added microplastics from products such as cosmetics, household and industrial detergents, cleaning products or granular infill for use on synthetic sports surfaces. It covers all synthetic polymer particles below five millimeters (mm) that are organic, insoluble and resistant to (bio)degradation.

Manufacturers and industrial downstream users of synthetic polymer microparticles in the form of pellets, flakes, and powders used as feedstock in plastic manufacturing at industrial sites are exempt from the sales ban as stated in paragraph 4(a) of the annex to the regulation. Meanwhile, the loss of plastic pellets represents an important industrial source of microplastics in the environment. According to the regulation, manufacturers should (1) provide instructions with respect to use and disposal to industrial downstream users from October 17, 2025 onwards, and (2) fulfill reporting obligations to authorities related to pellet loss to the environment from May 31, 2026 onwards. The plastic pellet supply chain, that SABIC is part of, is already putting in place voluntarily initiatives (including reporting) to minimize pellet loss.

SABIC is committed to implementing Responsible Care<sup>®</sup> and global sustainability programs (such as The Alliance to End Plastic Waste, Operation Clean Sweep<sup>®</sup>, etc.) throughout the value chain that are designed to prevent and address accidental releases of plastic pellets into the environment. Accordingly, SABIC recommends implementation of systems and practices by downstream users to prevent and address incidental releases in order to protect the aquatic environment from potential (long-term) negative effects of plastic materials. Please note that Safety Data Sheets as supplied by SABIC already provide instructions for use and disposal explaining how to prevent releases to the environment.

# Phthalates / Endocrine Disruptors / CMR substances / Cosmetics Regulation / EuPIA Exclusion Policy

We can inform you that this SABIC Product contains residual traces of a phthalate at a concentration level below 2 ppm [<0.0002%(w/w)]. It originates from the catalyst system used in the manufacturing process.

The used phthalate is allowed as a "technical support agent in polyolefins in concentrations up to 500 ppm [0.05 %(w/w)] in the final product" according to Commission Regulation (EU) 10/2011 on materials and articles intended to contact food. The residual phthalate traces fully comply with the applicable requirements listed in that regulation and in Directive 2005/84/EC on phthalates in toys and childcare articles (repealed by EU Regulation (EC) No 1907/2006; see item 51 of Annex XVII).

These residual phthalate traces are not subject to authorization and Annex XIV (Authorisation List) of EU Regulation (EC) No 1907/2006 incl. amendments (see Status of SABIC Product with respect to REACH Registration / SVHC / ANNEX XIV / ANNEX XVII).

According to the recipe in the production, the SABIC Product does not contain substances listed by the following lists or regulations, except for above-mentioned residual traces of a phthalate:

 Substances listed in the Endocrine Disruptor Lists I, II and III (<u>www.edlists.org</u>; latest update November 2023). That also covers substances referred to in item I and II of Article L. 5232-5 of the Public Health Code, France.

#### Page 5 of 14

سابک خطاعت

Version: 19 April 2024

Please note that these lists include the dithiocarbamate based fungicide 'Mancozeb' (CASRN 8018-01-7) and 'Cholecalciferol' (Vitamin D3; CAS 67-97-0).

- Substances classified as CMR (all categories) according to the Regulation (EC) 1272/2008 on the classification, labelling and packaging of substances and mixtures and its amendments, excluding authorised substances as referred to in Articles 5 and 6 of EU Commission Regulation (EU) No 10/2011 on plastic materials and articles intended to come into contact with food, and its amendments.
- "Substances prohibited in cosmetic products" as listed in Annex II or "Substances which cosmetic products must not contain except subject to the restrictions laid down" as listed in Annex III of EU Regulation (EC) No 1223/2009/EC on cosmetic products including amendments up to and including Commission Regulation (EU) 2023/1545 of 26 July 2023.
- Substances (Group A G) as listed in the EuPIA Exclusion Policy for printing inks and related products, 6<sup>th</sup> Edition of March 2024.

#### **California Proposition 65**

According to the recipe in the production of the SABIC Product, the following substance(s) as such is / are not intentionally added:

 Substances (at levels resulting in exceedance of indicated safe harbor levels) mentioned in the list of chemicals known to cause cancer or reproductive toxicity (Safe Drinking Water and Toxic Enforcement Act of 1986) of the California Proposition 65, updated December 29, 2023.

According to the recipe in the production, the trace residuals of a phthalate originating from the catalyst system used in the polymerization process do not exceed indicated safe harbor levels.

#### Animal origin, TSE/BSE, Kosher/Halal

According to the recipe in the production of the SABIC Product, the following substances as such are not intentionally added:

alcohol

The absence has not been checked by tests.

It has to be recognized that the SABIC Product is not produced in an exclusive "Halal or Kosher Certified" surrounding.

We have to inform you that according to the recipe in the production of the SABIC Product, substances of bovine origin are used.

Our suppliers have informed us that in line with Commission Regulation (EU) No. 142/2011 of 25 February 2011 implementing Regulation (EC) No. 1069/2009, the sourced fats are coming from BSE free countries or are obtained exclusively from class 3 animal by-products.

#### Page 6 of 14

Version: 19 April 2024

During the production process, the fats undergo:

- a hydrogenation process at temperature above 220° C for at least 120 minutes at more than 15 bars
- a hydrolysis or hydrolytic reaction at a temperature above 200° C for at least 120 minutes at 20 bars.

It is the opinion of our suppliers that their process fully exceeds the conditions recommended by:

- Note for guidance on minimising the risk of transmitting animal spongiform encephalopathy agents via human and veterinary medicinal products (EMA/410/01 rev. 3)
- CPMP (Committee for Proprietary Medical Products) in guideline BWP/5136/03 of 21 October 2004 and amendments
- Scientific Committee on Cosmetology of 24 June 1997 and the conditions mentioned in Annex VI chapter III of Regulation (EC) No. 1774/2002
- Annex II of Commission Directive 2000/6/EC of 24 January 2000

Based on this information there is no reason for SABIC to take action or to switch its source of supply, unless it is requested to do so by authorities in order to guarantee absence of animal-based derivatives in the additives used.

# Per- and PolyFluorinated Alkyl Substances (PFAS)

Per- and Polyfluorinated Substances (hereinafter "PFAS" <sup>1</sup>) are a chemical class with diverse molecular structures and physical, chemical and biological properties. The term PFAS is a broad, general, non-specific term that does not inform whether a substance, which fits into this chemical class, is harmful or not <sup>2</sup>.

There are currently no global absolute bans on PFAS, but a comprehensive package of strategies on taking broad-scale regulations or restrictions worldwide to regulate PFAS is currently under development.

This SABIC Product does not contain intentionally added PFAS. According to the formulation in the production of the SABIC Product, the following substances as such are not intentionally used or added:

- Per- and PolyFluorinated Alkyl Substances (PFAS) including, but not limited to:
  - o Per- and PolyFluorinated Carboxylic Acids (PFCA) and their derivatives
    - (e.g. Long Chain PerFluorinated Alkyl Carboxylates (LCPFAC) and their salts and precursors, TFA, PFPA, HFBA, PFHxA, PFOA, PFNA and "GenX substances")
  - Per- and PolyFluorinated Sulfonic Acids (PFSA) and their derivatives (e.g. PFBS, PFHxS, PFOS, PFOSA)
  - PerFluoroEther Carboxylic Acids (PFECA) and their derivatives
  - PerFluoroEther Sulfonic Acids (PFESA) and their derivatives

#### Page 7 of 14

سابک عندان*ی* 

Version: 19 April 2024

- PerFluoroAlkyl Phosphonic or Phosphinic Acids (PFPhA, PFPiA) and their derivatives
- o Fluorinated polymers (e.g. PTFE, FEP, PVDF, PVF)
- PerFluoroPolyEthers (PFPE)
- 1 About PFASs OECD Portal on Per and Poly Fluorinated Chemicals
- https://www.oecd.org/chemicalsafety/portal-perfluorinated-chemicals/terminology-per-and-polyfluoroalkyl-substances.pdf

#### PPW / ELV / RoHS / WEEE / CONEG

The chemical composition of the SABIC Product complies with:

- EU Directive **94/62/EC** of 20 December 1994 on packaging and packaging waste (**PPW**), up to and including EU Directive (EU) 2018/852 of 30 May 2018.
- EU Directive **2000/53/EC** of 18 September 2000 on end-of life vehicles (**ELV**), up to and including Commission Delegated Directive (EU) 2023/544 of 18 September 2023.
- EU Directive 2002/95/EC of 27 January 2003 on the restriction of the use of certain hazardous substances in electrical and electronic equipment (RoHS 1), recast by European Directive 2011/65/EU (RoHS 2), amended by European Directive (EU) 2015/863 of 31 March 2015 (RoHS 2 amendment), up to and including Commission Delegated Directive (EU) 2023/1437 of 4 May 2023.
- China Standard GB/T 26572-2011, "Requirements of concentration limits for certain restricted substances in electrical and electronic products." issued by China's Ministry of Industry and Information Technology (MIIT).

Since the SABIC Product does not contain brominated flame-retardants, this material is not subject to the selective waste requirements of Annex VII of Directive **2012/19/EU** of the European Parliament and of the Council of 4 July 2012 on waste electrical and electronic equipment (**WEEE**) and amendments.

With respect to heavy metals (Cadmium, Mercury, Lead and hexavalent Chromium), the chemical composition of the SABIC Product complies with:

- EU Directive **94/62/EC** of 20 December 1994 on packaging and packaging waste (**PPW**), up to and including EU Directive (EU) 2018/852 of 30 May 2018.
- EU Directive **2000/53/EC** of 18 September 2000 on end-of life vehicles (**ELV**), up to and including Commission Delegated Directive (EU) 2023/544 of 18 September 2023.
- Coalition of Northeastern Governors (CONEG) developed "Model Toxics in Packaging Legislation".

The SABIC Product is not classified as "hazardous mixture" according to EU Regulation (EC) 1272/2008 on the classification, labelling and packaging of substances and mixtures (**CLP**), and amendments.

#### Page 8 of 14

Version: 19 April 2024

We can inform you that based on the acute toxicity information (oral rat  $LD_{50}$ ) for high molecular weight polymers in general, to the best of our knowledge, it is our opinion that the SABIC Product is essentially non-toxic if used and handled according to specifications outlined in the Safety Data Sheet (SDS).

We advise you to follow the safety guidelines and recommendations in the SDS.

#### Certain restricted substances

According to the recipe in the production of the SABIC Product, the following substances as such are not intentionally used or added:

- Acetone
- Acetyl tributyl citrate (ATBC)
- Acrylamide(s)
- Acrylonitrile
- Active and intelligent materials as defined in Commission Regulation (EC) No 450/2009 of 29 May 2009.
- AlkylPhenols (AP) and AlkylPhenol Ethoxylates (APE) (e.g. nonylphenol or nonylphenol ethoxylates)
- Amide solvents such as, but not limited to, N,N-dimethylformamide (DMF), N,N-dimethylacetamide (DMA) and N-methyl-2-pyrrolidone (NMP)
- Amine catalysts, amine reagents, amine solvents
- Anisoles (incl. chloro and bromo anisoles)
- Anthraquinone and its derivatives
- Antimicrobials (antibiotics, disinfectants, antiseptics)
- Antimony trioxide, antimony pentoxide
- (Aromatic) diamines (e.g. benzidine, 4,4'-methylenedianiline (MDA))
- Asbestos
- Azides
- Aziridine(s)
- Azodicarbonamide(s), hydrazine(s)
- Azo-dyes, azo-pigments and azo-colorants
- BADGE, BFDGE or NOGE and derivatives as referred to in Commission Regulation (EC) No 1895/2005 of 18 November 2005 on the restriction of use of certain epoxy derivatives
- Benzene
- Benzophenone and its derivatives
- Benzo[a]pyrene, benzo[e]pyrene
- Benzotriazole (BTA)
- Biocides (preservatives, insecticides, disinfectants, antiseptics, pesticides, fumigants, fungicides such as mancozeb)

DISCLAIMER: THE MATERIALS, PRODUCTS AND SERVICES OF SAUDI BASIC INDUSTRIES CORPORATION (SABIC) OR ITS SUBSIDIARIES OR AFFILIATES ("SELLER") ARE SOLD SUBJECT TO SELLER'S STANDARD CONDITIONS OF SALE, WHICH ARE AVAILABLE UPON REQUEST. INFORMATION AND RECOMMENDATIONS CONTAINED IN THIS DOCUMENT ARE GIVEN IN GOOD FAITH. HOWEVER, SELLER MAKES NO EXPRESS OR IMPLIED REPRESENTATION, WARRANTY OR GUARANTEE (i) THAT ANY RESULTS DESCRIBED IN THIS DOCUMENT WILL BE OBTAINED UNDER END-USE CONDITIONS, OR (ii) AS TO THE EFFECTIVENESS OR SAFETY OF ANY DESIGN OR APPLICATION INCORPORATING SELLER'S MATERIALS, PRODUCTS, SERVICES OR RECOMMENDATIONS. UNLESS OTHERWISE PROVIDED IN SELLER'S STANDARD CONDITIONS OF SALE, SELLER SHALL NOT BE RESPONSIBLE FOR ANY LOSS RESULTING FROM ANY USE OF ITS MATERIALS, PRODUCTS, SERVICES OR RECOMMENDATIONS. DESCREDED IN THIS DOCUMENT. - Bisphenol-A, -AP, -AF, -B, -BP, -C, -C2, -E, -F, -G, -M- S, -P, -PH, -TMC, -Z
- Boric acid; diboron trioxide; tetraboron disodium heptaoxide, hydrate; disodium anhydrous; orthoboric acid sodium salt; disodium tetraborate tetraborate, decahydrate; disodium tetraborate pentahydrate
- Butylated hydroxyanisole (BHA)
- Butylated hydroxytoluene (BHT)
- Carbamates
- Chlorinated paraffins (SCCP, MCCP, LCCP)
- Chlorobenzene
- Chlorofluorocarbons (CFCs), hydrochlorofluorocarbons (HCFCs), hydrofluorocarbons (HFCs)
- Chlorophenols (e.g. pentachlorophenol)
- 2-Chloro-propanol
- 3-Chloro-1,2-propanediol (3-MCPD)
- Cobalt (Co) or mica sourced from conflict-affected and high-risk areas in accordance with the OECD Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas.
- Conflict Minerals (cassiterite / tin; columbite-tantalite (coltan) / tantalum; wolframite / tungsten and gold), as referred to in Title XV, Section 1502 of the Dodd-Frank Wall Street Reform and Consumer Protection Act
- Cyanides
- Cytotoxins, endotoxins, hormones
- 1,3-Dichloro-2-propanol (1,3-DCP)
- Dimethylfumarate (DMF)
- Dioxins and furans
- 2-Ethylhexylhexanoic acid (2-EH)
- Ethylene oxide
- **Engineered nanomaterials**
- **Epichlorohydrin**
- Epoxidized soy bean oil (ESBO)
- Formaldehyde
- Flame retardants chlorinated, brominated, phosphorous-based (incl. (organophosphorus) compounds) (e.g. HBCD, TBBPA, phosphinates)
- Fragrances, perfumes
- Genetically Modified Organisms (GMO) or substances derived thereof
- **Glycolethers**
- Glyoxal (ethanedial)
- Ground bamboo, bamboo flour or fibers, corn flour
- Human pathogens
- Human substances and substances of human origin (e.g. blood, DNA, insulin)

- Polyvinylchloride (PVC), Polyvinylidene chloride (PVDC), Chlorinated Polyvinylchloride (CPVC) and Polychloroprene (neoprene)
- Primary Aromatic Amines (PAA) and substances that can generate primary aromatic amines.
- Pyridine(s)
- Quaternary ammonium compounds
- Radioactive substances
- Rare-earth elements: Cerium (Ce), Dysprosium (Dy), Erbium (Er), Europium (Eu), Gadolinium (Gd), Holmium (Ho), Lanthanum (La), Lutetium (Lu), Neodymium (Nd), Praseodymium (Pr), Promethium (Pm), Samarium (Sm), Scandium (Sc), Terbium (Tb), Thulium (Tm), Ytterbium (Yb), and Yttrium (Y).
- Recycled materials
- Rosin, colophony (a.k.a. colophonium) and substances derived thereof
- Semicarbazide
- Silicones, silicone oils, siloxanes
- Substances (above limit values applying to Product class I) as listed in Annex 4 of the OEKO-TEX® Standard 100, Edition 01.2023
- Substances (above the mentioned concentration levels) as listed in the Global Automotive Declarable Substance List (GADSL) reference list, version V1.0, February 1<sup>st</sup>, 2024.
  - \* This statement does not include information about presence or absence of PFAS, please find information about PFAS in the respective chapter of this declaration. This statement does not include information about presence or absence of Critical Raw Materials (CRM) by the European Commission
- "Substances causing allergies or intolerances" as listed in Annex II of Regulation (EU) No 1169/2011 of the European Parliament and of the Council of 25 October 2011 on the provision of food information to consumers. These include: Cereals, Crustaceans, Eggs, Fish, Peanuts, Soybeans, Milk, Nuts, Celery, Mustard, Sesame seeds, Sulphur dioxide and sulphites, Lupin and Molluscs
- Substances on the OSPAR List of Chemicals for Priority Action (Revised 2013)
- Substances that could potentially be converted into nitrosamine compounds (nitrosatable substances) in any of the manufacturing steps and applied process conditions.
- Substances classified as Persistent, Bioaccumulative, and Toxic (PBT) Chemicals under Toxic Substances Control Act (TSCA), Section 6(h), as amended by the Frank R. Lautenberg Chemical Safety for the 21st Century Act, including those issued by the US EPA via five final rules on January 6, 2021:

Decabromodiphenyl ether (DecaBDE)
Phenol, isopropylated phosphate (3:1) [PIP (3:1)]
Pentachlorothiophenol (PCTP)
Hexachlorobutadiene (HCBD)

CASRN 133-49-3
CASRN 87-68-3

o 2,4,6-tris(tert-butyl) phenol, (2,4,6-TTBP)

CASRN 732-26-3

Thiurams

Titanium acetylacetonate (TAA)

Version: 19 April 2024

- Triaryl phosphites, Triclosan, Triclocarban
- Triethyl amine
- 2,2,4-Trimethyl-1,3-pentanediol diisobutyrate (TXIB)
- Tris(nonylphenyl, branched and linear) phosphite (TNPP)
- Vinyl Chloride Monomer (VCM)
- Volatile Organic Compounds in a concentration exceeding the limit (3%) of the Swiss regulation SR 814.018: "Verordnung über die Lenkungsabgabe auf Flüchtigen Organischen Verbindungen (VOCV)" of November 12<sup>th</sup> 1997
- Xylene

#### **Halogens**

Regarding the presence of halogens in the SABIC Product we can inform you that according to the recipe in the production the following substances as such are not intentionally used or added:

 Halogens (Bromine, Fluorine, Iodine, Astatine, except for Chlorine) or halogen compounds.

The SABIC Product contains trace amounts of organic or inorganic chlorine compounds, originating from the catalyst system used in the manufacturing process (Chlorine level is <50 ppm). It is a "Halogen-Free" material according to the International Electrochemical Commission's (IEC) definition of Halogen-Free (IEC 61249-2-21).

#### **SABIC® TRUCIRCLE™** certified renewable and circular products

SABIC is committed to provide its customers with more sustainable solutions in order to accelerate the circular carbon economy. SABIC launched its TRUCIRCLE™ certified circular and renewable portfolio in an effort to transform today's linear economy into a sustainable circular economy for plastics.

The chemical recycling concept of SABIC® TRUCIRCLE™ certified circular and renewable polymers is referred to as advanced or feedstock recycling. It is based on thermal conversion technologies to produce pyrolysis oil (circular) or bio-based (renewable) feedstocks as primary outputs. These are used as alternative cracker feedstock sources to (partly) replace fossil-based cracker feedstocks <sup>a)</sup>. The application of feedstock recycling in the manufacture of SABIC® TRUCIRCLE™ certified circular and renewable polymers ensures that these polymers are identical to their conventional fossil-based counterparts in both technical and regulatory respect. They are drop-in replacements for their fossil feedstock-based counterparts for use, under the same conditions, in all application areas without need for additional measures.

At this moment, there are two ways to identify SABIC® TRUCIRCLE™ certified circular and renewable products <sup>b)</sup>. The first way is via specific suffixes that are added to the names of their original fossil-based counterparts. The second way is through feedstock indicators in combination with the name of the original fossil feedstock-based products. These indicators are displayed in the customer portal and/or mentioned on invoice / shipping documentation.

## Page 13 of 14

Version: 19 April 2024

Both naming options are depicted in tables 1 and 2 below:

| Suffix | Feedstock origin                  |
|--------|-----------------------------------|
| С      | Mixed Plastic Waste               |
| CO     | Ocean Bound Plastic               |
| В      | Crude Tall Oil                    |
| BU     | Used Cooking Oil                  |
| BV     | Vegetable Oil Processing Residues |

Table 1. Product identification via suffixes

| Indicator                 | Feedstock origin                  |
|---------------------------|-----------------------------------|
| TRUCIRCLE™ Circular MPW   | Mixed Plastic Waste               |
| TRUCIRCLE™ Circular OBP   | Ocean Bound Plastic               |
| TRUCIRCLE™ Renewable CTO  | Crude Tall Oil                    |
| TRUCIRCLE™ Renewable PFAD | Vegetable oil processing residues |
| TRUCIRCLE™ Renewable UCO  | Used Cooking Oil                  |

Table 2. Product identification via indicators

Example: STAMAX™ 40YM243 - in all colours (TRUCIRCLE™ Renewable UCO) is a TRUCIRCLE™ certified renewable version of fossil feedstock based STAMAX™ 40YM243 - in all colours.

The content of this document equally applies to the TRUCIRCLE™ certified circular and renewable variants of fossil feedstock-based STAMAX™ 40YM243 - in all colours.

- <sup>a)</sup> Additional supply sources may be added in the future.
- b) Product naming options may differ between product portfolios and may be subject to change. Customers will be informed accordingly.

#### **General information**

The information disclosed in this RDS is, to the best of our knowledge, based upon data from the manufacturing process and/or raw material suppliers or manufacturers. Although many substances are declared as "not intentionally added" to the SABIC Product throughout this RDS, it does not exclude the presence of negligibly slight traces due to, amongst others, impurities in the components supplied by external parties and used in the production of such components.

Please note that analysis of the raw materials and/or the SABIC Product for presence of the above-mentioned substances on a routine basis is neither part of quality control plans, nor part of SABIC Product specifications, and hence it shall not be construed as any warranty, expressed or implied.

SABIC recommends users to take appropriate precaution during storage, transportation and use of SABIC Products to avoid contamination and deterioration. Please refer to the SABIC Product's Safety Data Sheets (SDS) before use.

SABIC makes no recommendation for suitability of this SABIC product in the downstream user's intended application. SABIC has no control over finished plastic materials or articles nor over their manufacturing, processing and use conditions and can never accept any responsibility for compliance of these finished plastic materials or articles. SABIC cannot be held responsible for changes that may result from further processing of its product by other parties in the supply chain. It is the responsibility of downstream users to determine whether its use of SABIC products in a particular application is suitable and to check compliance of their final product with relevant regulations. Material or product performance in the end application should be validated through proper end use testing based on the information provided by the supply chain.

This declaration applies to the material as it leaves its production facilities. It does not cover any substance(s) or mixture(s) subsequently added and/or improper material processing or article fabrication further down the supply chain.

Please note carefully that Regulations develop continuously and that SABIC declarations may be adapted accordingly. This declaration replaces all previous versions relating to this subject and product, and will be valid for a period of 1 (one) year, after which it will automatically expire.

If you have further questions, or require any additional information on the above, please use the "Contact Us" form on the SABIC website. After selecting the option "Products" and your product, choose "Regulatory" as option under "What is the nature of your inquiry". The form is available via <a href="https://www.sabic.com/en/contact">https://www.sabic.com/en/contact</a>.
