

# POLYPROPYLENE SOLUTIONS FOR INTERIOR TRIM

Lightweighting can be a challenge when automakers are seeking to enhance interior content. Cost is also a concern. SABIC has solutions for both needs, such as our CXO2 and CXO3 grades.

- SABIC polypropylene solutions from our portfolio can help reduce both weight and cost. For example, consider our CX02 and CX03 grades – already specified by a number of large global automakers.
- These unfilled copolymers come with low density (0.9 kg/cm3) to enable weight reduction.
- These grades also offer a favorable cost/performance balance compared to some alternative material choices.
- Our CX02 grade is suited for interior applications requiring high stiffness (e.g. claddings not subject to crash requirements), while CX03 can meet high impact requirements for applications such as door panels, pillar trim, etc.
- Both grades are also available as emission-optimized materials.
- These SABIC® PP compounds are available in natural, enabling easy and flexible coloring on the injection-molding machine. We can also match your preferred color.
- Our dedicated automotive team is here to help. In addition to proven materials, we can provide engineering resources and assistance to support the optimization of your design.
